EXAMINER

NELSON, ALECIA DIANE

ART UNIT	PAPER NUMBER
----------	--------------

2629

DATE MAILED: 07/27/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

08/904,056

Applicant(s)

LINDSEY, TODD D.

Examiner

Alecia D. Nelson

Art Unit

2629

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 May 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 23,26-32,34,37-44 and 46-49 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☐ Claim(s) 23,26-32,34,37-44 and 46-49 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: _____

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. ***Claims 23, 32, 34, 39, 41, and 47-49*** are rejected under 35 U.S.C. 103(a) as being unpatentable over Schultheiss (U.S. Patent No. 6,208,384) in view of Amano (U.S. Patent No. 5,376,970) and Applicant's admitted prior art.

With reference to **claims 23, 32, 41, and 47-49**, Schultheiss teaches a mouse device (50) for a computer (10) operatively coupled to a multimedia device (40) comprising: a housing (52), a mouse button (66a, 66b) within the housing to control an operation on the computer (12), a cursor control device (64) coupled to the housing (52), at least one multimedia control device (62) disposed within the housing (52) to control only the multimedia device through the computer (12), a connection that transmits signals generated by the mouse button, cursor control device, and multimedia control device to the computer (see column 5, lines 23-56); and wherein the at least one control device provides immediate accessibility to the multimedia device through the computer, wherein the immediate accessibility to the multimedia device through the

Art Unit: 2629

computer is accessing the menu which controls the functions of the multimedia device (see column 5, lines 57-65). With further reference to **claims 34 and 39**, Schultheiss teaches that the computer (12) has a processor (20, 20a) and a memory (32) (see column 4, lines 60-68). Further it is taught the usage of a connection that operatively couples the pointing device to the computer through a port of the computer through which all communication between the pointing device and the computer occurs (see column 5, lines 23-43).

While Schultheiss teaches that the multimedia device is a trackball type remote device, including a cursor control device extendable through the upper wall of the housing, and a mouse button and at least one multimedia control located on the upper wall of the housing, there fails to be any teaching of the multimedia device having a housing arrangement which allows for the device to be operated on a surface wherein a cursor control device is disposed to be extendable through the bottom wall and an upper wall portion comprising a top wall portion and a perimeter wall portion extending between the top wall portion of the upper wall and the bottom wall, wherein the mouse button is disposed on the top wall and at least one multimedia control device being disposed on the perimeter wall portion of the upper wall, as recited in **claims 23, 34, 41, and 47-49**. However the examiner takes Official Notice that the usage of a trackball device and a mouse device as interchangeable devices are well known to those skilled in the art. Further to shift location of parts is not an invention (see *In re Japikse*, 86 USPQ 70 CCPA 1950). Therefore it would have been obvious to one having ordinary skill in the art at the time of the invention to allow the multimedia device of Schultheiss

Art Unit: 2629

to be carried out as a mouse type device allowing for the same functionality to thereby control a multimedia device in a manner which is easier for the user. Also, while teaching that the multimedia device is accessed through control of the positioning device, Schultheiss fails to teach directly controlling the function of the multimedia device in a single step without a menu via the pointing device of the control. Also, while Schultheiss teaches the usage of a computer incorporating a CD-ROM, the CD-ROM is described in relation to the memory device, as opposed to a multimedia device as recited in the claim.

Amano teaches a display system for a video apparatus (abstract), including a monitor (10) and a remote control unit (34) comprising remote control keys (31, 33) and a light emitting diode (32t), which transmits a key output in the form of infrared rays to a photodiode (32r) for receiving infrared rays emitted therefrom (see column 2, lines 38-68). Amano teaches that at least one multimedia control device (33) which directly controls at least one function (channel or volume) of the multimedia device (10) in a single step and without the use of a menu or other graphic display (see column 3, line 4-column 4, line 29). Therefore it would have been obvious to allow for the usage of a direct single step controller on the pointing device, as taught by Amano, to be used in the multimedia control device similar to that which is taught by Schultheiss in order to allow for quicker controller over the multimedia device.

The admitted prior art teaches that multimedia applications for computer typically come installed with at least one audio and/or video device, wherein it is further stated

Art Unit: 2629

that CD-ROMs drives are common and allow computer users to play audio and video which reside on CD-ROMs inserted into the drive (see page 1, line 9-page 2, line1).

Therefore it would have been obvious to one having ordinary skill in the art at the time of the invention to allow the multimedia device to be incorporated within the house of the computer as discussed in the admitted prior art, which can be controlled by a mouse device having direct control when controlling multimedia devices as described by Schultheiss and Amano, in order to thereby provide a mouse device which is capable of controlling a multimedia device integrated within the computer which allows for easier control over the multimedia device to the user.

3. ***Claims 26, 37, and 42*** are rejected under 35 U.S.C. 103(a) as being unpatentable over Schultheiss in view of Amano and Applicant's admitted prior art as applied to **claims 23, 32, 34, 39, and 41** above, and further in view of Hall.

With reference to **claims 26 and 42**, Schultheiss, Amano, and the admitted prior art teach all that is required as explained above with reference to **claims 23, 32, 34, 39, and 41**. Schultheiss further teaches with reference to **claim 42**, the usage of radio frequencies (see column 5, lines 30-43).

Schultheiss, Amano, and the admitted prior art fail to specifically teach that the signals from the multimedia device control and the computer cursor-positioning device are packetized as recited in the claim.

Hall teaches data transmission from a mouse to a host computer (see abstract) so as to transmit mouse activity through the cable (5) whenever there is a change in the

Art Unit: 2629

mouse. A change of state is defined as any motion of the mouse or any change in the position of either of its buttons (see column 3, lines 8-21)

Therefore it would have been obvious to one having ordinary skill in the art at the time of the invention to allow the signals from the computer cursor positioning device to be packetized and transmitted to a host computer similar to that which is taught by Hall, in a system similar to that which is taught by Schultheiss, Amano, and the admitted prior art in order to control the functions of the multimedia device at a faster rate.

With reference to **claim 37** Schultheiss, Amano, and the admitted prior art teach all that is required, however fail to specifically teach that the signals from the multimedia device control and the computer cursor-positioning device are packetized as recited in the claim.

Hall teaches that the signals from the multimedia device control and the computer cursor-positioning device are packetized as recited in the claim in teaching that the data transmission from a mouse to a host computer (see abstract) so as to transmit mouse activity through the cable (5) whenever there is a change in the mouse. A change of state is defined as any motion of the mouse or any change in the position of either of its buttons (see column 3, lines 8-21)

Therefore it would have been obvious to one having ordinary skill in the art at the time of the invention to allow the signals from the computer cursor positioning device to be packetized and transmitted to a host computer similar to that which is taught by Hall,

Art Unit: 2629

in a system similar to that which is taught by Schultheiss, Amano, and the admitted prior art in order to control the functions of the multimedia device at a faster rate.

4. **Claims 27-31, 38, 40, 43, 44, and 46** are rejected under 35 U.S.C. 103(a) as being unpatentable over Schultheiss in view of Amano and Applicant's admitted prior art as applied to **claims 23, 34, and 41** above, and further in view of Schindler et al. (U.S. Patent No. 5,900,867).

With reference to **claims 27 and 38**, Schultheiss, Amano, and the admitted prior art fail to teach the usage of a serial port on the computer.

Schindler et al. teaches an entertainment system using a personal computer as the heart of the system wherein the personal computer contains suitable receiving circuitry, which provides indications of the keys being pressed, being a serial connection or other form of connection (see column 5, lines 34-41).

Therefore it would have been obvious to one having ordinary skill in the art at the time of the invention to allow for the computer device as taught by Schultheiss, Amano, and the admitted prior art to include a serial port as suggested by Schindler et al. in order to provide a source for receiving the signals from the multimedia control and the cursor control in order for the signals to be processed for carrying out the appropriate function of the multimedia device (see column 5, lines 34-41).

With reference to **claims 28, 44, and 46**, Schultheiss teaches the usage of keys (62) for providing a broad range of conventional television remote control commands

Art Unit: 2629

disposed on the upper wall of the housing (see column 5, lines 54-55). As well known in the art, volume control is well known conventional television remote control commands. Amano teaches the usage of the controller (34) for controlling the volume of a speaker (12) located in the housing of the monitor (10) (see column 1, lines 10-20; column 2, lines 39-42). Schultheiss and Amano however fail to specifically teach that the multimedia control device comprises a volume control slider or wheel.

Schindler et al. teaches the usage of channel control buttons (916) and volume control (918), as well as thumbwheel (934). It is taught that thumbwheel (934) is used to adjusting the power of the RF signal (see column 14, lines 33-37).

Therefore it would have been obvious to one having ordinary skill in the art at the time of the invention to allow the thumbwheel of Schindler et al. having the ability to be used as the volume control in the multimedia device taught by Schultheiss, Amano, and Schindler et al.. It would be obvious to allow for such modification because it is well known to those skilled in the art interchangeably using switches, buttons, sliders, wheels, trackball, ect. as input devices. This would allow for arrangement, which may be more comfortable for the user to manipulate.

With reference to **claim 29-31**, Schultheiss teaches that the multimedia control device comprises multiple actuators (keys 58, 62, 66) disposed on the upper wall of the housing for directly controlling functions of tuning and other television functions (see column 5, lines 23-65, column 6, lines 63-68), wherein the functions are any of a broad range of conventional television remote control commands (see column 5, lines 54-55),

Art Unit: 2629

which would be obvious to include next/previous channel and preset stations. Further, Amano teaches the usage of the mouse (20) for controlling the volume of a speaker connected to the host computer (see column 10, lines 52-53).

Schultheiss fails to specifically teach that the multimedia control device comprises multiple actuators for directly controlling functions of a CD-ROM device or speaker, wherein one or more such functions are selected from a group of conventional functions.

Schindler et al. teaches that one of the multimedia devices consist of a CD jukebox (168) and stereo-surround sound system (158) for audio output to one or more speakers (160).

Therefore it would have been obvious to one having ordinary skill in the art at the time of the invention to allow the usage of the CD and speaker devices of Schindler et al. in a multimedia device similar to that which is taught in the combinations of Schultheiss and Amano in order to provide the user with a more accessible manner for controlling the functions of a plurality of different device from one control device.

With reference to **claims 40 and 43**, Schultheiss, Amano, and the admitted prior teach all that is required as explained above with reference to **claim 34**, however fails to teach the usage of a amplifier coupled to at least on of a speaker, radio tuner, television tuner, or an optical display player. While Schultheiss and Amano teach a plurality of multimedia control devices for controlling different multimedia devices, there fails to be

teachings of the multimedia control devices being located on different parts of the housing.

Schindler et al. teaches the usage of amplified speakers (1624) (see column 21, lines 7-9). Schindler et al. also teaches a plurality of multimedia control devices for controlling a plurality of different multimedia devices wherein some of the buttons are located on the top of the housing and wherein a selection button (913) is provided under the housing. Moreover, location of the multimedia control devices is designer's choice, wherein it would be obvious to allow the buttons to be placed in various positions of the device for more convenient control for the user.

Therefore it would have been obvious to allow the usage of an amplifier to be used in conjunction with the speakers, and to allow the placement of the control buttons to be located in different positions on the control device similar to that which is taught by Schindler et al. in a system similar to that which is taught by Schultheiss, Amano, and the admitted prior art in order to improve the sound be emitted from the speakers when playing audio on the system.

Response to Arguments

5. Applicant's arguments with respect to ***claims 23, 26-32, 34, 37-44, and 46-49*** have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

WANG (U.S. Patent No. 5,771,038) and JAASKELAINEN (U.S. Patent No. 6,115,029) teaches a mouse device containing a housing having a bottom wall for resting on a surface having a cursor control device extendable through the bottom wall, a mouse button disposed on the top wall of the upper wall, and at least one additional control disposed on the perimeter wall of the upper wall.

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alecia D. Nelson whose telephone number is 571-272-7771. The examiner can normally be reached on Monday-Friday 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sumati Lefkowitz can be reached on 571-272-3638. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

9. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
